Feeder storage

DRY-CABI for feeders of each company
It is also possible to manufacture a shelf board.

Rust prevention

Beware of maintenance and storage methods for molds and metal products!

Occurrence of rust, mold clearance, product accuracy quality It has a big impact.

Rust gradually occurs from around 40% RH, and at 65% RH rapidly Increase So-called hot and humid weather conditions with a temperature of at least 20 ° C and a humidity of at least 65% RH In this case, corrosion (rust) is very likely to occur.

DRY-CABI can meet various requests.(OPTIONS)

- 1** It can be manufactured in the desired special size.
- 2** The humidity setting conditions can be changed by making the upper and lower stages separate (separate room) type.
- 3** With a load bearing type, 100 to 200 kg per shelf board, a total load of 1000 kg is also possible. (For storage of molds and special raw materials)
- 4** It is also possible to apply conductive paint and electromagnetic shielding paint.
- 5** N₂Gasket N Flow meter alarm function etc. can also be mounted.
- 6** Reel rack, slide type shelf board, installation of wrist strap Is possible.
- 7** Earthquake-resistant specification, with adjuster bolt, adjuster foot It is also possible to attach a caster, a connection bracket, and a fall prevention bracket.
- 8** It is also possible to manufacture stainless steel shelf boards and stainless steel bodies.
